Executive Summary

This report presents an analysis of 226,278 website traffic events recorded over seven days (August 19–25, 2021) for a music streaming link platform. The dataset, sourced from Kaggle (bhanupratapbiswas/website-traffic-analysis), contains nine fields: event type, date, country, city, artist, album, track, ISRC, and link ID. Data quality is excellent — only the ISRC column shows notable missingness (3.15%, or 7,121 rows), while all other fields are over 99.9% complete.

Traffic is dominated by three event types — pageview (62.8%), click (24.6%), and preview (12.6%). Saudi Arabia is the single largest source of traffic (20.9%), followed by India (19.0%) and the United States (14.4%), underscoring a strong Middle East and South Asia user base. The track "Jalebi Baby" by Teshar accounts for 18.1% of all events, signalling heavy concentration in a single viral piece of content. Daily traffic peaked on August 19 (35,361 events) and declined ~16% by mid-week before partially recovering.

3 Actionable Insights

#01

OPPORTUNITY

Localise for MENA users

Saudi Arabia drives 21% of traffic alone. Prioritise Arabic (RTL) layouts and region-specific landing

#02

CONVERSION

Close the preview → click gap

28,531 previews that do not convert to clicks are lost revenue events. A/B test richer preview cards —

#03

RETENTION

Schedule content drops mid-week

Traffic dips ~16% by Wed–Thu. Scheduled email/push campaigns or new content releases on those days

Analysis & Visualizations

Summary Statistics & Data Types

Column	Type	Unique Values	Missing	Top Value / Mode
event	string	3	0 (0%)	pageview (142,015)
date	datetime	7 days	0 (0%)	Aug 19 (35,361 events)
country	string	211	11 (0.005%)	Saudi Arabia (47,334)
city	string	11,993	11 (0.005%)	Jeddah (22,791)
artist	string	2,419	37 (0.016%)	Tesher (40,841)
album	string	3,252	7 (0.003%)	Jalebi Baby (40,841)
track	string	3,562	5 (0.002%)	Jalebi Baby (40,841)
isrc	string	709	7,121 (3.15%)	QZNWQ2070741 (40,841)
linkid	string	3,839	0 (0%)	2d896d31-... (40,841)

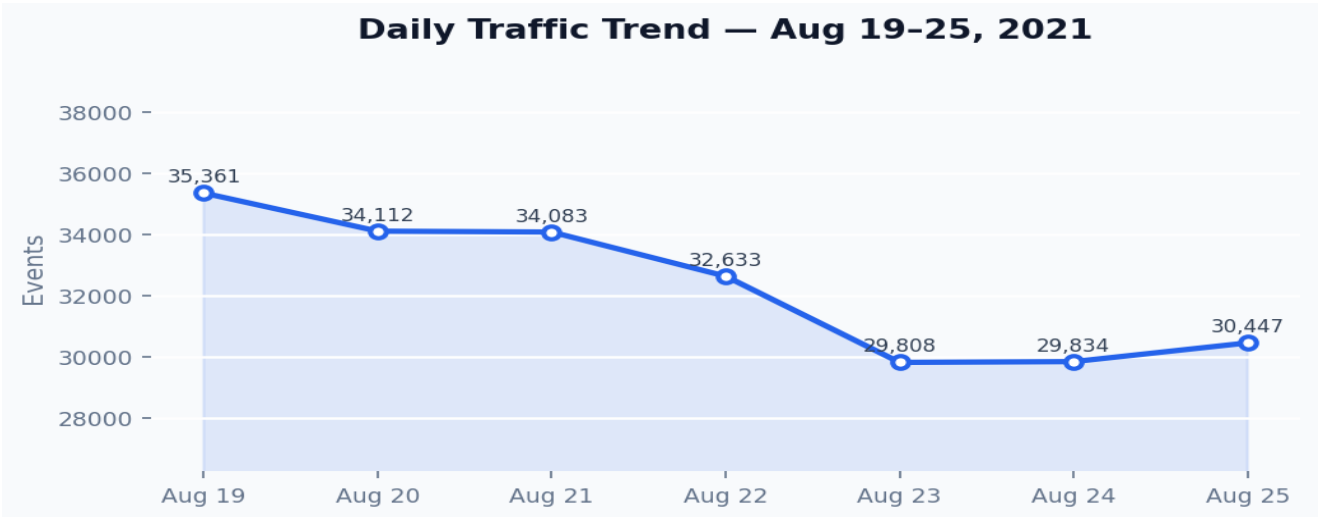

* ISRC (track identifier) is the only column with notable missingness. All other fields are 99.9%+ complete.

Visualization 1 — Event Type Distribution (Bar Chart)

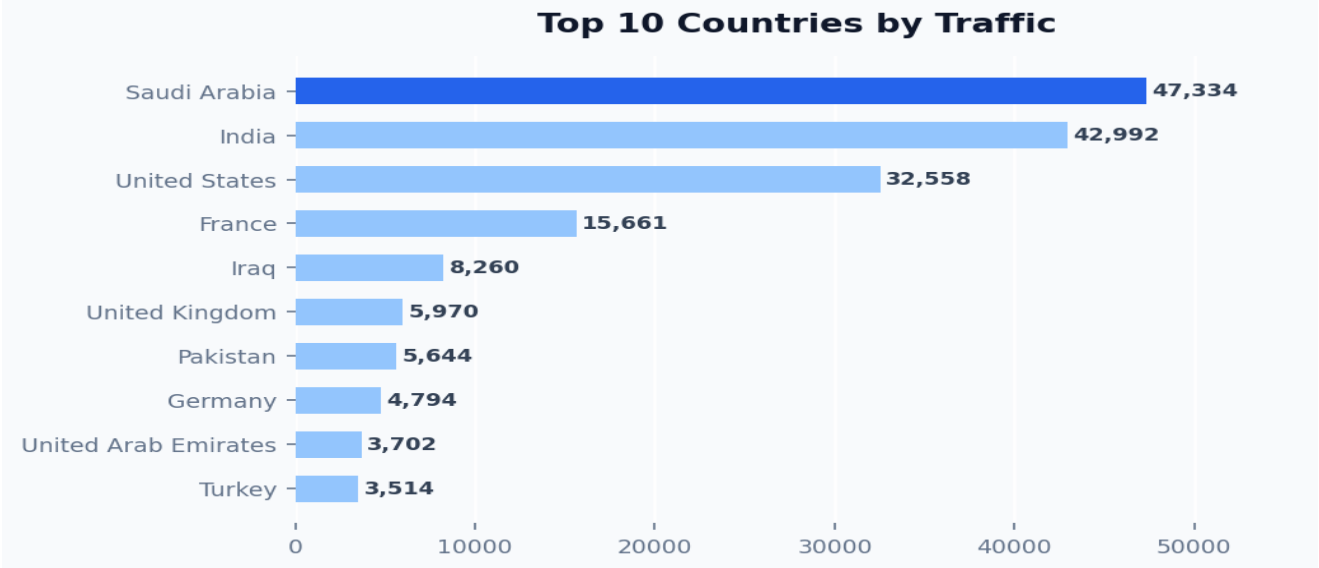

Pageviews dominate at 62.8% of all events, confirming most sessions involve content discovery. Clicks (24.6%) reflect genuine engagement, while Previews (12.6%) represent a mid-funnel interaction that does not always convert to a full click.

Visualization 2 — Daily Traffic Trend (Line Chart)

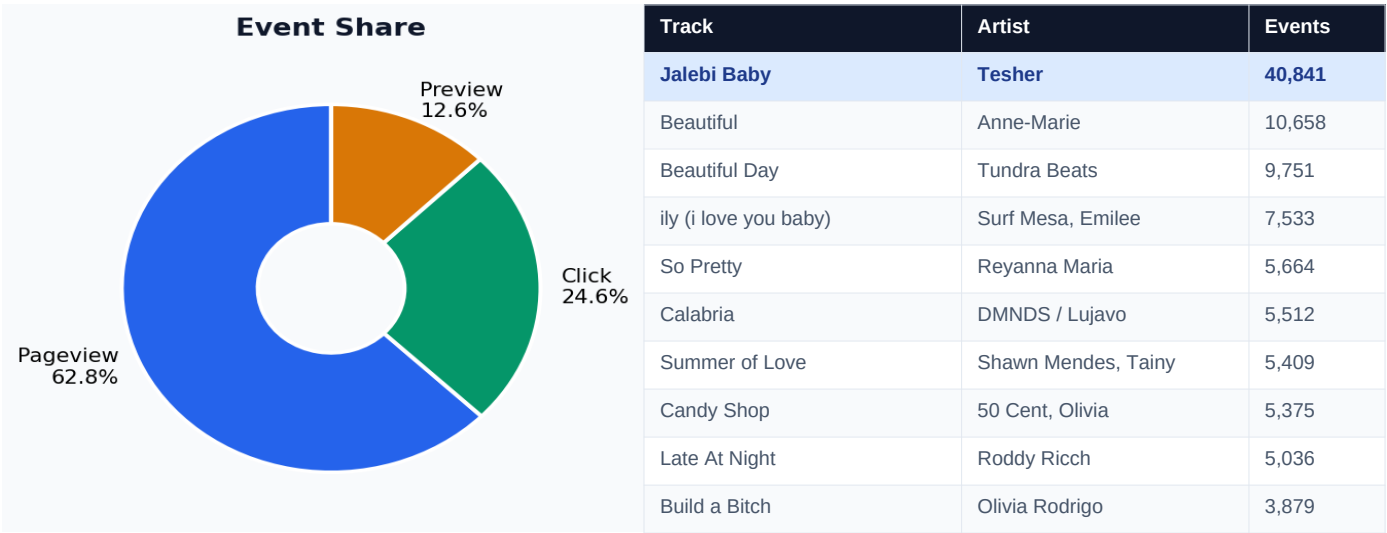

Traffic is highest on the first day of the period (35,361) and declines through mid-week. A slight recovery is visible on Aug 25, suggesting weekend uplift. Scheduled promotional pushes on Wed–Thu could significantly smooth this curve.

Visualization 3 — Top 10 Countries by Traffic (Horizontal Bar)

Saudi Arabia, India, and the United States form a dominant triad, contributing over 54% of total traffic combined. The heavy MENA representation (Saudi Arabia, Iraq, UAE, Turkey) strongly argues for an Arabic-first localisation strategy.

Visualization 4 — Event Share (Pie) & Top Tracks

"Jalebi Baby" alone accounts for 18.1% of all events, nearly double the second track. This concentration risk means traffic would drop sharply if this single viral track loses popularity. Diversifying promoted content is a strategic priority.

Action Items for Alfido Tech

1. MENA Localisation

Translate landing pages to Arabic with RTL layout. Target Saudi Arabia and Iraq with geo-specific campaigns. Expected impact: 10–15% uplift in MENA conversion rate.

2. Preview-to-Click Optimisation

Add 30-second audio previews and artist social-proof badges to preview cards. A/B test CTA button copy ("Play Now" vs "Listen Free"). Target: recover 5% of 28,531 unclaimed preview sessions = ~1,400 additional weekly clicks.

3. Mid-Week Content Scheduling

Launch new track features and push notifications on Wednesday and Thursday to counteract the observed ~16% mid-week traffic dip. Use personalised email retargeting for returning users.

4. ISRC Data Quality Fix

7,121 missing ISRCs (3.15%) prevent accurate royalty attribution and track-level reporting. Implement a validation pipeline at ingestion to require ISRCs for all new content records.

5. Reduce Single-Track Dependency

"Jalebi Baby" drives 18% of all events. Diversify promoted playlists and surface emerging artists (e.g. Anne-Marie, Tundra Beats) to build a more resilient traffic profile.
